

The Post – 2010 APEC Trade Agenda

Narongchai Akrasanee, Ph.D.

22 October, 2010 Tokyo, Japan

Major factors affecting foreign trade

Previously, to 2000

Trade, given prices, was determined by tariff rates and NTBs (price factor), and trading parties's income (demand factor).

The conclusion of UR in 1994, with subsequent establishment of WTO, made the tariff and NTBs factors less important.

Major factors affecting foreign trade (cont.)

From 2000

World trade grew rapidly.

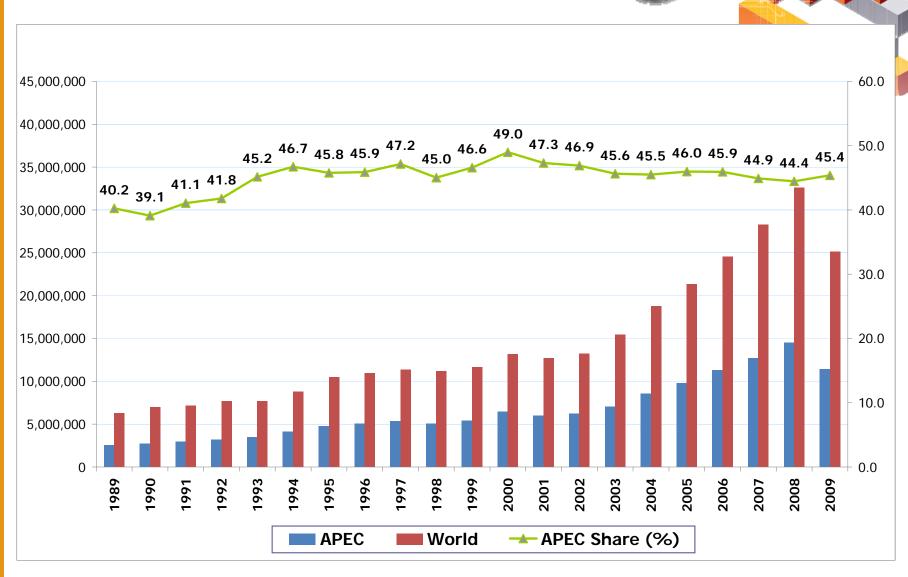

Share of APEC trade in world trade increased to about 45 %

Intra-regional trade in APEC countries also attained higher shares.

APEC and World Trade

Notes: East Asia = China+ Japan + Korea + HK + Chinese Taipei + Mongolia

East Asia-15 = 10 ASEAN member countries + China + Korea + Japan +HK+ Chinese Taipei

APEC aggregates are sums based on data available

Major factors affecting foreign trade (cont.)

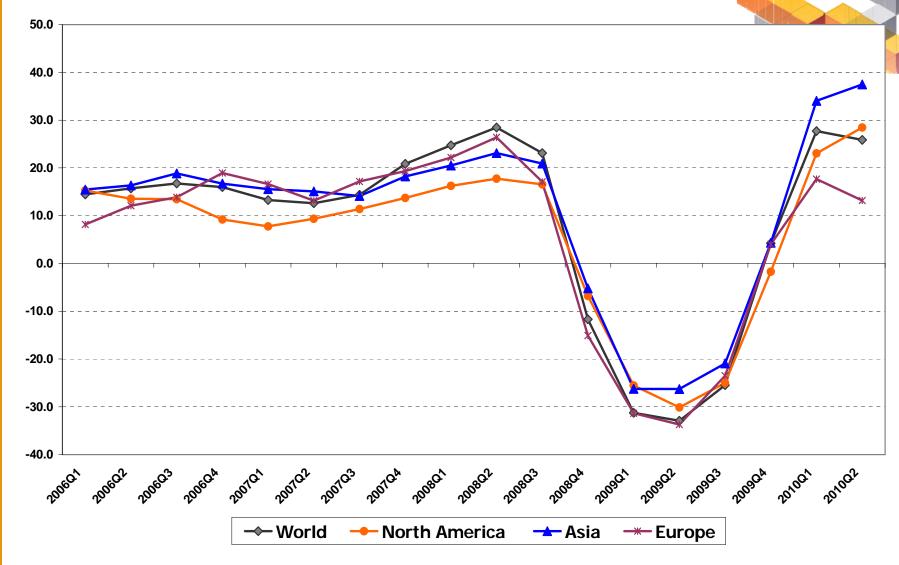

Trade recovery in 2010 reflected the impact of the various stimulus packages, and the changing pattern of demand for trade with East Asia particularly China.

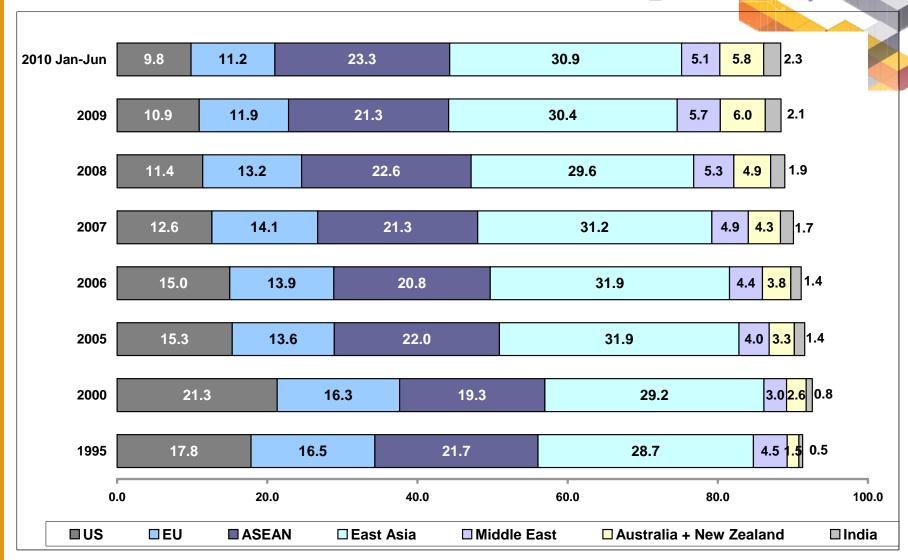

World Merchandise Exports by Region (% Change)

Japan Exports Markets

New factors affecting trade

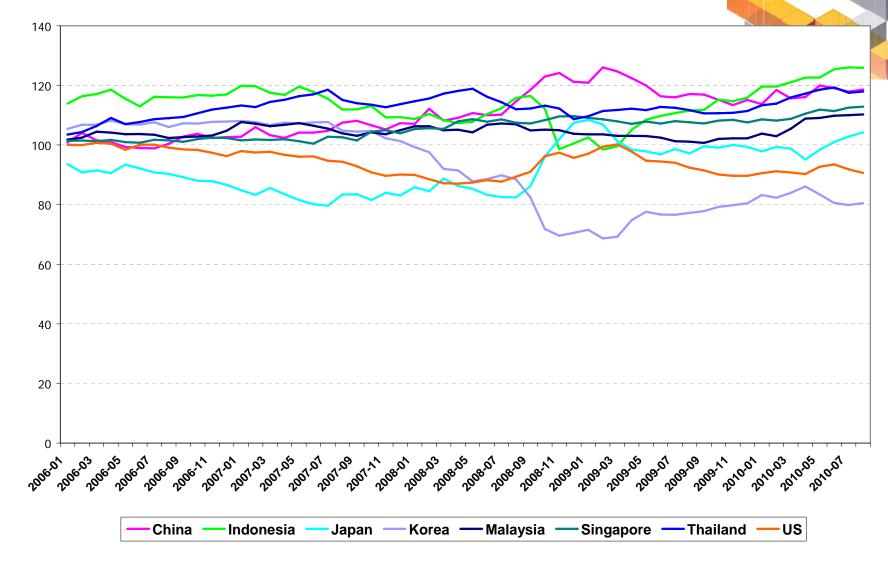

East Asian countries have been accused of not allowing the exchange rates to appreciate in line with their trade surplus, resulting in continuing, and for some growing, trade surplus, while the opposite is true for the US.

Real Effective Exchange Rate (2005 = 100)

Source: BIS

The debate at the 2010 IMF meeting and the "Currency Manipulation"

Bill in process in the US, clearly showed that exchange rate is now the most important factor affecting trade.

So, exchange rate must be a major item for APEC Trade Agenda.

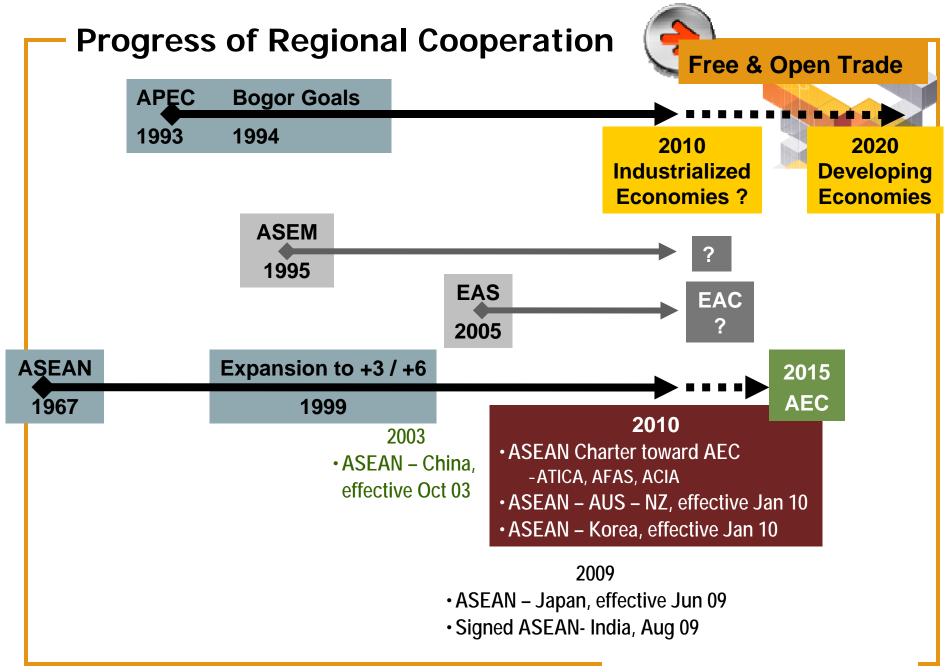

Another development is the effect

of FTAs / RTAs. Although it is hard to measure, it is obvious that the fact that intra-regional trade increased substantially must be due partly to this factor.

Looking at FTAs and RTAs in existence there are many problems of applications, particularly about rules of origins (ROOs), and dispute settlements. If improved, FTAs and RTAs would play a bigger role in trade.

Conclusions

APEC is likely to adopt the exchange rate issues as an item on trade agenda.

APEC should perhaps ask WTO to help multi-lateralize FTAs and RTAs, by making ROOs and dispute settlements practices more uniform and efficient.
